1. Project objectives & activities

Project **objective**

Improve the **policy instruments** of the participating regions

- Public interventions at local, regional or even national levels can be addressed
- But at least **one** policy instrument per project must be an **Investment for jobs and growth goal programme**

Project **activities**

- Exchange of experience & **capacity building** through identification and transfer of **good practices**
- **Pilot actions** possible from the start of the project or at mid-term (but maximum one per policy instrument)

What is a **good practice**

- A **policy-related** initiative
- Proved to be **successful** in a region
- Potential **source of inspiration** for other regions

Example of a **good practice**

Climate Toolkit 4 Business

This online toolkit **for SMEs** was developed in Ireland by the Department of Enterprise, Trade and Employment with the Department of Environment, Climate and Communications. It was launched in late 2021.

The toolkit provides SMEs with advice on **how to limit their environmental footprint**. It helps them consider the main pollution components of their business activity (energy, travel, materials, water) and break down their green transition into smaller components. The tool automatically generates an **action plan** for individual SME based on their consumption data.

Since its launch, close to **ten thousand users** viewed an individual climate action report for their business.

The tool development, promotion, maintenance and staff cost around **EUR 154,000**.

What is a **pilot action**

Implementation-related activities dedicated to **testing** a new public intervention approach.

Possible only under certain conditions:

- Clear contribution to policy improvements
- Clear interregional & testing character

Example of a **pilot action**

Autonomous shuttle service

The aim of this pilot action is to **improve the transport connectivity of suburban areas** in Vilnius and to provide access to public transport stops located outside of people's walking reach.

The pilot action will test in **three selected suburban areas** of Vilnius a 12-seat L4 autonomous electric shuttle service to escort children to/from local schools and connect adults to/from bus stops. It will **test the viability of the service**.

The Vilnius City Municipality will explore many aspects of the service before deciding **whether to scale up the solution** and include it in their **SUMP**. They will explore, for example, the vehicle model selection criteria, the impact of adverse weather conditions, the infrastructure requirements, optimal charging and routes, or operational costs.
